

Gorav Gumber

Bangalore, Karnatka, India (Open to Relocation)

+91-9799857350 | goravgumber@gmail.com | [linkedin.com/in/gorav-gumber-9319a2342](https://www.linkedin.com/in/gorav-gumber-9319a2342) | github.com/goravgumber

Education

Government Engineering College, Ajmer

B.Tech in Computer Science Engineering

Relevant Coursework: DSA, DBMS, OS, CN, System Design

Aug 2023 – May 2027

CGPA: 8.83/10

Technical Skills

Languages: C++, Python, JavaScript (ES6+), TypeScript, Java, SQL, Bash

Frontend: React.js, Next.js, Tailwind CSS, Redux Toolkit, HTML5/CSS3

Backend: Node.js, Express.js, FastAPI, RESTful APIs, Socket.IO, JWT, RBAC, Microservices, WebSockets

Databases & Cloud: MongoDB, PostgreSQL, MySQL, Redis, Docker, Docker Compose, AWS (EC2, S3 Basics), Linux (Fedora/RHEL), Nginx

AI & Systems: TensorFlow, scikit-learn, RAG, LangChain, OpenAI API, Vector Embeddings, Real-Time Systems, Distributed Backend Architecture

Developer Tools: Git/GitHub, Postman, Swagger/OpenAPI, GitHub Actions, CI/CD Basics, Vercel, Railway, Render, VS Code

Experience

Software Developer Intern, Infotact Solutions

Jul 2025 – Sep 2025

- **Lead Developer** for two cross-functional projects: a Collaborative AI Platform and "Bio-Companion," an AI-driven health and nutrition monitoring system.
- Spearheaded backend development for personalized meal planning and real-time health tracking modules.
- Managed version control and team collaboration using Git, ensuring clean code architecture and efficient PR workflows.
- Built secure backend APIs with JWT authentication and Role-Based Access Control (RBAC).
- Improved system performance by optimizing API workflows and database interactions.

Projects

Adaptive Ecosystem Simulator — Distributed AI Monitoring Platform

github.com/goravgumber/adaptive-ecosystem-simulator

- Engineered a production-oriented distributed platform for real-time ecosystem simulation, monitoring, and AI-powered prediction systems.
- Designed scalable backend architecture using Express.js, MongoDB, Socket.IO, JWT authentication, centralized middleware, logging, and monitoring services.
- Built isolated Python ML microservice using Flask, TensorFlow, and scikit-learn for ecosystem forecasting, anomaly detection, and collapse prediction.
- Implemented real-time event streaming, health monitoring, Swagger/OpenAPI docs, Docker-ready architecture, and backend service orchestration.
- **Tech Stack:** Node.js, Express.js, MongoDB, Redis, Socket.IO, Python, Flask, TensorFlow, Docker, Linux.

Customer Self-Service Portal — Enterprise Support Platform

customer-self-service-portal.vercel.app | github.com/goravgumber/customer-self-service-portal

- Developed a scalable enterprise support platform with authentication, case management, knowledge base, and community discussion systems.
- Built TypeScript backend with Express.js, MongoDB, Redis caching, JWT authentication, Salesforce REST integration, and centralized logging.
- Implemented production-ready API architecture with Docker support, Swagger documentation, health checks, resilient fallback handling, and CI-ready structure.
- Designed modern frontend architecture using React, Redux Toolkit, TanStack Query, protected routing, and responsive dashboard systems.
- **Tech Stack:** TypeScript, React, Node.js, Express.js, MongoDB, Redis, Docker, JWT, Salesforce API.

DevMind — AI Developer Knowledge Base (RAG)

github.com/goravgumber/DevMind

- Developing a backend-focused RAG platform enabling developers to query codebases, PDFs, and technical documents using natural language.
- Designed ingestion pipeline with semantic chunking, embeddings, vector search, and LLM-powered response generation.
- Implementing Redis-based semantic caching and PostgreSQL (pgvector) optimization for scalable retrieval performance.
- **Tech Stack:** Next.js, FastAPI, PostgreSQL (pgvector), Redis, OpenAI API, Docker.

SmartPark AI — IoT + Real-Time Monitoring System

smartpark-client.onrender.com | github.com/goravgumber/SmartPark-AI

- Built a deployed real-time smart parking platform using Raspberry Pi, ultrasonic sensors, OpenCV, and Socket.IO.
- Developed backend APIs and real-time communication services for live parking slot monitoring and event updates.
- Implemented interactive dashboard visualization with live synchronization between IoT devices and frontend clients.
- **Tech Stack:** React, Node.js, Express.js, Socket.IO, Raspberry Pi, OpenCV, Render.

Achievements

- **Technical Training:** Intensive Full Stack development program at **Multitech Bulls**, mastering the MERN stack, microservices architecture, and real-time systems.
- **Algorithmic Problem Solving:** Solved 100+ data structures and algorithms problems across LeetCode and GeeksforGeeks, achieving a **100-day consecutive streak** on GFG Problem of the Day.
- **Open Source & Community:** Completed the **#100DaysOfReact** challenge, building and documenting production-ready frontend components daily to a public audience on LinkedIn.
- **Hackathons:** Conceptualized and engineered functional full-stack prototypes under high-pressure, tight-deadline environments in multiple competitive hackathons.
- **Certifications:** Earned industry-recognized credentials in **SQL Database Management** and **Frontend Development**.
